-------------------------------------	---------------

Maintenance Scope and Deliverables

This maintenance invoice covers ongoing support services only. Domain renewals and hosting charges are billed separately.

- Routine website monitoring, health checks, and issue resolution
- CMS/content support for updates to pages, posts, and site sections
- Security updates, plugin updates, and patch management
- Minor UI/UX adjustments and performance improvements
- Monthly backup verification and data integrity checks
- Technical support and advisory for sustainable platform operations
- Domain renewal and hosting fees are billed separately under the hosting/domain invoice

Task Report – What We Did This Year

This report explains, in simple terms, the work we carried out to keep the EGP website running smoothly and up to date.

1. Keeping the Website Online and Secure

We made sure the website (egpghana.org) stayed available for visitors at all times. This included:

- Monitoring the server so the site does not go down
- Fixing problems when they occurred so visitors could always access the site
- Updating security measures to protect the website from online threats
- Ensuring photos and documents uploaded by staff could be stored and displayed correctly

2. Debt Tracker – Making Ghana’s Debt Data Easy to Understand

We improved the Debt Tracker so users can easily see and understand Ghana's public debt situation:

- Clear summary cards showing total debt, debt-to-GDP ratio, and debt service
- Charts showing how debt has changed over time (domestic vs external)
- Breakdown of who Ghana owes (creditors) and types of debt
- Risk assessment section to highlight areas of concern
- Timeline of Ghana's debt restructuring journey
- Admin tools so EGP staff can update debt figures when new data is released

3. IMF Monitor – Tracking the IMF Programme

We enhanced the IMF Bailout Monitor so the public can follow Ghana's IMF programme:

- Summary of key numbers: GDP growth, inflation, debt, reserves
- Progress bar showing how many IMF conditions have been met
- Chart of planned vs actual IMF disbursements (money received)
- Timeline of programme milestones and reviews
- List of conditions Ghana must meet, with status updates
- Admin tools so staff can update disbursements and conditions when new information is available

4. Economic Dashboard – Ghana's Economy at a Glance

We built and improved the Economic Dashboard to show Ghana's main economic indicators:

- Summary cards for GDP growth, inflation, exchange rate, unemployment, policy rate, and forex reserves
- Charts showing how GDP, inflation, and the exchange rate have changed over time
- Sections on government finances, external trade, jobs, and monetary policy
- Simple explanations of what the numbers mean

5. Admin Panel – Helping Staff Manage Content

We maintained and improved the admin area so EGP staff can manage the website without technical help:

- Add, edit, and publish news articles and reports
- Manage events and resources (policy papers, datasets)
- Upload and organise photos and documents in a media library
- Manage user accounts (who can log in and what they can do)
- Update economic data and dashboard figures
- Tools to check that the database and content are in sync

6. AI Chatbot – Answering Questions About Ghana’s Economy

We kept the AI assistant working so visitors can ask questions and get answers based on EGP’s content:

- Chatbot that answers questions using EGP’s articles and reports
- Ability to search the web for up-to-date information when needed
- Clear, readable answers with links to sources

7. Visitor Analytics – Understanding Who Uses the Site

We maintained the analytics system so EGP can see how the website is used:

- Number of visitors and page views
- Which pages are most popular
- Where visitors are from (country, city)
- What devices they use (phone, tablet, computer)

8. Fixes and Improvements

Throughout the year we fixed issues and made small improvements:

- Fixed article links so they work correctly when shared
- Fixed photo uploads so images display properly on the live site
- Improved how content is synced between local and live versions
- Updated economic data to reflect the latest figures

Thank you for your partnership. OceanCyber – ICT Solutions Provider
